

Ganapathy N

Profile Summary

- Senior Frontend & Full Stack Developer with **6+ years of experience** specializing in **React.js, Next.js, React Native, TypeScript**, and modern JavaScript ecosystems for scalable enterprise web and mobile applications.
- Strong expertise in **React.js, Next.js App Router, React Native, Micro Frontend Architecture**, reusable component libraries, responsive UI systems, and scalable frontend architecture patterns.
- Hands-on experience building high-performance applications using **Redux Toolkit, Redux-Saga, Zustand, TanStack Query, Tailwind CSS, Material UI, Ant Design, Styled Components, Emotion, Storybook, Shadcn UI, React Hook Form, and Framer Motion**.
- Extensive experience in **React Native mobile development**, including mobile-first architecture, reusable components, API integration, push notifications, deep linking, authentication flows, and mobile performance optimization.
- Strong expertise in frontend performance optimization including **lazy loading, dynamic imports, memoization, virtualization, bundle optimization, code splitting, SSR, SSG, ISR, App Router, Server Components**, and rendering optimization in Next.js applications.
- Proficient in backend development using **Node.js** and **Express.js** for designing scalable **RESTful APIs**, authentication systems, RBAC, webhook integrations, and backend services supporting React ecosystems.
- Experienced in integrating third-party services including **payment gateways, SMS/email services, Firebase, analytics platforms, Generative AI APIs**, and cloud-native integrations.
- Skilled in scalable state management using **Redux Toolkit, Context API, Zustand, TanStack Query**, caching strategies, and real-time application workflows.
- Hands-on experience with **AWS, Firebase, Docker, GitHub Actions, AWS CodePipeline**, and CI/CD pipelines for scalable cloud deployment and release automation.
- Proven experience delivering enterprise applications across **Healthcare, SaaS, Cybersecurity, Maritime, Real Estate, and Workflow Automation** domains with strong focus on scalability, accessibility, UX, and maintainability.
- Strong understanding of frontend engineering best practices including **component-driven architecture, Storybook, accessibility standards, responsive design systems, unit testing, E2E testing, code reviews, and Agile/Scrum methodologies**.
- Proven ability in technical leadership, mentoring frontend developers, collaborating with UI/UX teams, and delivering scalable frontend solutions aligned with business goals and modern engineering standards.

Technical Expertise

Languages & Core Technologies : JavaScript (ES6+), TypeScript, HTML5, CSS3, JSON

Frontend Technologies : React.js, Next.js, Redux, Redux-Saga, Zustand, TanStack Query

Mobile Development : React Native, Expo, Mobile-first Architecture, Push Notifications, Deep Linking, Mobile API Integration

Cloud & DevOps : AWS (EC2, S3, Lambda), Firebase, Docker, GitHub Actions, AWS CodePipeline, CI/CD Automation

Version Control & Collaboration : Version Control & Collaboration

Educational Qualifications:

CLASS/COURSE	Institution	Percentage /CGPA
BE(ECE)	Velalar College of Engineering and Technology	6.9
HSC	Sengunthar Higher Secondary School, Erode	80.83%
SSLC	Sengunthar Higher Secondary School, Erode	93.2%

Project Details:

Health Care Application

Client: India

Environment: React.js, Next.js, React Native, TypeScript, JavaScript, Tailwind CSS, Redux Toolkit, React Query, Micro Frontend Architecture, Storybook, REST APIs, AWS (EC2, S3), DigitalOcean, Git, GitHub Actions, CI/CD, Generative AI, LLM Integration

Synopsis: An Integrated Health-Tech Platform designed to connect patients, doctors, and pharmacies through scalable web and mobile applications supporting online medicine ordering, virtual consultations, appointment scheduling, and home healthcare services with secure and responsive user experiences.

Roles and Responsibilities:

- Developed scalable and high-performance web and mobile applications using **React.js, Next.js, React Native, TypeScript, and Tailwind CSS** with reusable component architecture and Micro Frontend implementation.
- Built responsive healthcare modules including **appointment scheduling, virtual consultations, medicine ordering, patient dashboards**, and real-time healthcare workflows across web and mobile platforms.

- Designed reusable UI systems and scalable component libraries using **Storybook**, improving frontend consistency, maintainability, and development efficiency across applications.
- Optimized frontend and mobile application performance using **lazy loading, memoization, dynamic imports, code splitting, SSR**, and rendering optimization with **Redux Toolkit** and **React Query**.
- Integrated **Generative AI / LLM-powered features** to enhance healthcare assistance, intelligent workflows, and personalized user experiences.
- Collaborated with UI/UX teams and Agile/Scrum teams while managing frontend deployment workflows using **GitHub Actions, AWS, DigitalOcean**, and CI/CD automation.

Learning Management System

Client: India

Environment: React.js, Next.js, React Native, TypeScript, JavaScript, Bootstrap, Ant Design, React Query, REST APIs, PostgreSQL, Git, GitHub, RBAC, AWS, Jest, Agile Scrum

Synopsis: A cybersecurity-focused Learning Management System (LMS) developed to deliver interactive e-learning experiences, hands-on security training, assessments, and simulation-based learning through scalable web and mobile applications with secure user access and centralized learning management.

Roles and Responsibilities:

- Developed scalable and responsive web and mobile applications using **React.js, Next.js, React Native, TypeScript, Bootstrap, and Ant Design**, delivering interactive learning experiences and cybersecurity training workflows.
- Built dynamic LMS modules including **course management, progress tracking, assessment systems, subscription workflows**, and simulation-based learning dashboards with responsive and user-friendly interfaces.
- Implemented efficient frontend state management, API integration, and data synchronization using **React Query**, improving caching strategies, application responsiveness, and real-time user experiences across LMS modules.
- Designed reusable and modular UI components following scalable frontend architecture and component-driven development practices to improve maintainability, consistency, and development efficiency.
- Integrated secure frontend workflows with **REST APIs, authentication systems, protected routing, and Role-Based Access Control (RBAC)** for secure learner and administrator access management.
- Optimized frontend performance using **lazy loading, component optimization, reusable architecture patterns**, and efficient rendering techniques for scalable learning platforms.

- Collaborated with UI/UX designers and Agile/Scrum teams through sprint planning, code reviews, debugging, testing, and feature delivery while contributing to frontend quality and continuous application improvements.
- Supported frontend deployment workflows and release management using **AWS, GitHub, CI/CD pipelines**, version control best practices, and automated deployment processes for reliable application delivery.

Maritime Asset & Vessel Management Platform

Client: UK

Environment: React.js, Next.js, React Native, TypeScript, Tailwind CSS, Redux Toolkit, REST APIs, Storybook, MongoDB, Git, GitHub, Github actions, CI/CD, Agile Scrum, RBAC, Cloud Architecture

Synopsis: An enterprise-grade maritime management platform developed to streamline fleet operations, vessel tracking, cargo workflows, and secure document management through scalable web and mobile applications with real-time monitoring and responsive user experiences.

Roles and Responsibilities:

- Developed scalable and responsive web and mobile applications using **React.js, Next.js, React Native, and TypeScript** for vessel operations, cargo workflows, fleet monitoring, and enterprise asset management systems.
- Built dynamic frontend modules for **fleet tracking, cargo management, machinery monitoring, document workflows**, and operational dashboards with optimized user experiences across web and mobile platforms.
- Designed reusable UI components and scalable frontend architecture using **Storybook**, modular component patterns, and responsive design systems to improve maintainability and development consistency.
- Implemented secure frontend integrations with **REST APIs, authentication systems, protected workflows**, and **Role-Based Access Control (RBAC)** for enterprise-level operational security.
- Developed advanced document management interfaces supporting document creation, versioning, audit tracking, publishing workflows, access restrictions, and controlled document lifecycle operations.
- Optimized frontend performance using **lazy loading, memoization, dynamic imports, SSR**, rendering optimization, and efficient state management techniques for large-scale enterprise workflows.
- Collaborated with cross-functional teams in Agile/Scrum environments while managing frontend deployment workflows using **AWS Pipelines, GitHub**, cloud-native CI/CD automation, and continuous delivery practices.

Lead Distribution System (SaaS)

Client: Australia

Environment: React Native, React.js, Next.js, TypeScript, Styled Components, Node.js, Express.js, PostgreSQL, REST APIs, Git, GitHub, SMS Integration, Email Services, Webhooks, Agile Scrum

Synopsis: A scalable Real Estate Lead Management Platform developed to automate and optimize verified seller lead distribution through mobile-first web and mobile applications with onboarding workflows, real-time communication integrations, and secure API-driven systems.

Roles and Responsibilities:

- Developed scalable mobile-first web and mobile applications using **React Native, React.js, Next.js, TypeScript**, and Styled Components for lead management and onboarding workflows.
- Built core SaaS modules including **lead lifecycle management, sales territory allocation, onboarding workflows, scheduling systems**, and investor management dashboards.
- Integrated real-time communication systems using **SMS services, email notifications, and webhook integrations** to ensure instant lead delivery and workflow synchronization.
- Designed responsive UI components and reusable frontend architecture patterns to improve scalability, maintainability, and user experience consistency across platforms.
- Implemented secure frontend integrations with **REST APIs, authentication workflows, protected routing**, and role-based operational access controls.
- Optimized application performance using **lazy loading, reusable architecture patterns, rendering optimization**, and efficient API handling for scalable SaaS workflows.
- Collaborated in Agile/Scrum environments through sprint planning, debugging, testing, feature delivery, and continuous frontend improvements to enhance platform scalability and operational efficiency.
